Classification & Valuation Matrix

CIA Dimension	High (3)	Medium (2)	Low (1)
Confidentiality (C)	Unauthorized disclosure causes severe financial, legal, or reputational damage (e.g., client financial data, DSGVO breach).	Unauthorized disclosure causes moderate operational embarrassment or minor competitive disadvantage.	Publicly available data or data with no commercial sensitivity.
Integrity (I)	Unauthorized modification renders the SaaS platform unusable or corrupts client financial analytics, violating SLAs.	Unauthorized modification requires significant manual effort to identify and correct.	Minor errors that do not impact client deliverables or business operations.
Availability (A)	Unavailability directly impacts the core SaaS platform, violating client SLAs and triggering NIS2 reporting thresholds.	Unavailability degrades internal productivity but does not immediately impact external clients.	Loss of availability is a minor nuisance with readily available workarounds.
